

CONGRATULATIONS!

★ To Peterborough City Hospital for randomising their 2nd participant this month ★

★ To Southend University Hospital for enrolling 2 participants in February ★

★ To Royal Bournemouth Hospital for enrolling and randomising a participant in the same month ★

★ To King's College Hospital for enrolling their 10th participant into the trial! ★

What To Do In The Event Of A Crossover

For participants assigned to the conservative management (CON) strategy, avoidance of unnecessary cardiac catheterisation (Cath) is critically important to protect the ability to test the study hypothesis.

The CON strategy permits Cath only for participants who fail optimal medical therapy (OMT), i.e. those who experience a nonfatal myocardial infarction, resuscitated cardiac arrest, hospitalisation for unstable angina or heart failure, or who have angina that is refractory to medical therapy. Elective Cath for any other reason is a protocol violation. As per appropriate use criteria for stress imaging, investigators should not perform routine stress tests for the purpose of monitoring ischemia in patients who are clinically stable. Strategies to prevent crossover are not directed toward patients who have experienced a suspected ACS.

Please contact the ISCHEMIA CCC ischemia@nyumc.org BEFORE an elective cath is performed on any patient assigned to the CON strategy wherever possible. More details are available in the MOO via the website www.ischemiatrial.org. For any questions, please email Grace or the CCC.
