

ISCHEMIA Trial Update
-UNITED STATES OF AMERICA-

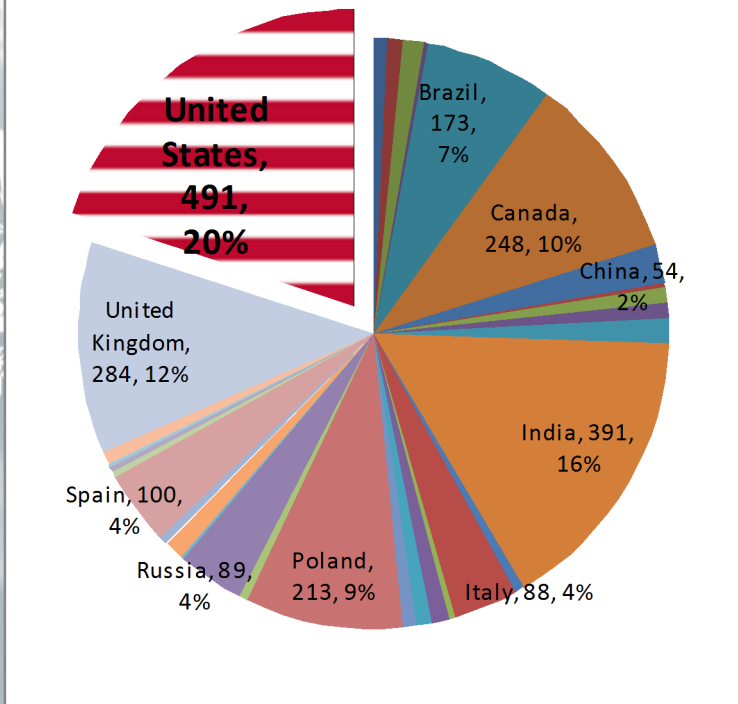

NYU Cardiovascular Clinical Research Center

Winter 2015

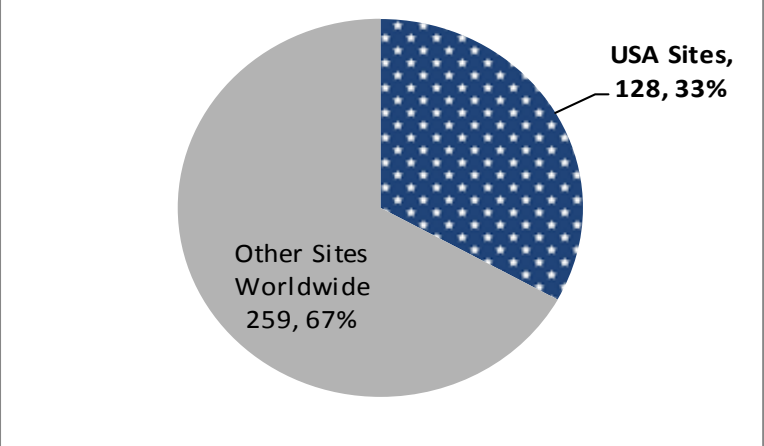

The United States leads the world in the total number of randomizations, but together we can do much more!

Total Randomizations Worldwide

The US represents 33% of all enrolling sites worldwide, but only accounts for 20% of all randomizations. Lets change this statistic in 2016!

Total Number of Enrolling Centers

Meet the team at the Atlanta VA

"Enrolling patients in ISCHEMIA is actually extremely rewarding for us—our patients love the fantastic care they get, and we all participate in a study that will shape the treatment of ischemic heart disease for years to come"

Dr. Mavromatis

The Atlanta V.A. Medical Center, Decatur, GA, is the top randomizing site in the United States. The team is led by Principal Investigator Dr. Kreton Mavromatis. Dr. Mavromatis is excited to be the top randomizer in the US and would like to thank his coordinators Raven Lee and Risha Patel, and co-investigators Dr. Jason Linefsky and Dr. Joe Xie, for their efforts.

Thank you and congratulations to you all!

Congratulations to the Top Randomizing Sites in the US
